

REASONS TO CONSIDER

High Income Potential

QDCC seeks to generate income through covered call writing, which historically produces higher yields in periods of volatility.⁽¹⁾

Monthly Distributions

QDCC expects to make distributions on a monthly basis.

Efficient Options Execution

QDCC writes call options on the Global X S&P 500 Quality Dividend ETF (QDIV), saving investors the time and potential expense of doing so individually.

The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. High short-term performance, when observed, is unusual and investors should not expect such performance to be repeated. Returns for periods greater than one year are annualized.

[Click here](#) for standard performance as of the most recent quarter-end.

DEFINITIONS

Cboe QDIV ATM BuyWrite Index

The Index measures the performance of a theoretical portfolio that employs a covered call strategy, as determined by Cboe Global Indices, LLC ("Index Provider"). The Index's covered call strategy provides long exposure to a reference ETF and "writes" (or sells) covered call options on the reference ETF. Specifically, the Index holds a theoretical portfolio of the Global X S&P 500 Quality Dividend ETF (the "Reference Fund") and "writes" (or sells) a succession of one-month at-the-money ("ATM") covered call options on the Reference Fund.

(1) Covered call writing can limit the upside potential of the underlying security.

Investing involves risk, including the possible loss of principal. There is no guarantee dividends will be paid. Companies may reduce or eliminate dividends at any time. QDCC engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset and writing a call option on that same asset with the goal of realizing additional income from the option premium. By selling covered call options, the fund limits its opportunity to profit from an increase in the price of the underlying asset above the exercise price, but continues to bear the risk of a decline in the asset. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the asset's current market price. QDCC is non-diversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

Carefully consider the Fund's investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the Fund's full or summary prospectus, which may be obtained by calling 1.888.493.8631, or by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
